Eventra - System Functionalities

Project Overview

Eventra is a web-based platform that allows users to discover events and participate in them, while also enabling organizers to publish and manage their own events. The platform connects participants and organizers through a simple and modern interface.

Each registered user receives a unique QR code that acts as a digital ticket. When a user registers for an event, the QR code can be scanned by the organizer at the entrance. After scanning, the system displays the participant's information such as first name, last name, profile photo, and email address, confirming that the user is registered for that event.

Functionalities

User Registration and Roles
Users can create an account and choose between two roles: Guest or Organizer.
Guests can access their account immediately after registration.
Organizers must be approved by an Admin before they can publish events.

User Profile
Each user has a profile where they can view and edit personal information, see their unique QR code, check their upcoming or past events and receive notifications about future events.

Event Discovery
Users can browse and search for events based on filters such as date, location, city, category, or popularity.

Event Details
Each event has a dedicated page containing information such as title, date, location, capacity, type of entry (free or paid), and a description.

Event Registration
Guests can register for events directly from the event page.

Waiting List System
Events have a limited capacity. When an event becomes full, users can join a waiting list.
The list works on a **first-come, first-served basis**. If a participant cancels, users move forward in the queue, and the first user is automatically registered for the event. Users receive **profile notifications** about their waiting list position and event updates.

QR Code Access System
Every user receives a unique QR code that functions as their event ticket.
Organizers can scan participant QR codes at the event entrance to verify their registration.

Event Creation
Approved organizers can create and publish events including details such as title, date, location, category, price, capacity, and description.

Admin Control
Admins approve organizer accounts and manage events published on the platform.
